

## **Which output formats are supported by WibTeX?**

Monday, 25 January 2010 00:08 - Last revised Thursday, 04 February 2010

---

Standard output from WibTeX is either a list of references in Microsoft Word, OpenOffice or a BibTeX file that can be processed by TeX/LaTeX (see my links for more details). However, if you just want to quickly blog some bibliography on the Web or use the WibTeX data in word processing, you may export to HTML, RTF (rich text format) or CSV (comma separated values, basically a spreadsheet like Excel).
